Leksell GammaPlan[®]

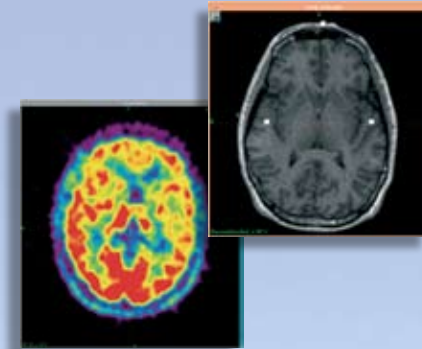

Step into the PC world for
powerful planning

Get it now! – Leksell

Make the migration

Elekta has released an efficient migration path to move from existing UNIX-based systems to Leksell GammaPlan® on PC.

The latest software releases for Gamma Knife® surgery are now using state-of-the-art tools based on Linux and PC. The Leksell GammaPlan migration program provides an efficient upgrade path to the future with improved workflow, cost-efficiency and treatment quality.

• Co-register any image

Leksell GammaPlan facilitates treatment planning, evaluation and follow-up by supporting and co-registering all imaging modalities – CT, MRI, angio, PET and MEG.

Patient database

• Ready for future opportunities

By entering the trustworthy and secure Linux world you gain full advantage of future opportunities and can quickly embrace the latest clinical and technical refinements.

GammaPlan on PC

Clinics

- **Collaborate remotely on-line**

Leksell GammaPlan® supports on-line collaboration with physicians by enabling treatment planning from separate local and remote locations or affiliated clinics. Simultaneous multi-user access to 1.5 TB patient database.

- **Instant planning of complex targets**

The WARPSpeed™ feature automatically and instantly provides updates on the effect of each new consecutive shot, thus making it possible to fully realize the potential of composite shots, while also simplifying the elaboration of new dose plans.

- **New dimensions give freedom in planning**

You are free to plan days ahead of treatment, prepare tomorrow's follow-ups and plan additional treatment. Re-Treatment™ also lets you integrate images and vital treatment information from previous plans.

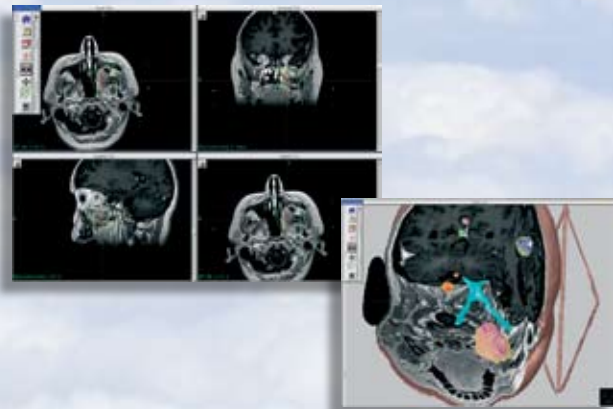

Desktop workstation

- **Precise planning**
– even for multiple targets

Planning the treatment of multiple lesions is now as easy as planning for a single target. It takes only minutes to create treatment plans that deliver superior conformity and selectivity. This is possible because a proprietary algorithm enables automatic balancing of radiation dosages over as many iso-centers as clinically deemed optimal.

- **Previous patient records integrated**

Of course legacy Leksell GammaPlan patient records can be converted and transferred into the PC-based Leksell GammaPlan system.

- Ready for future opportunities
- Co-register any image
- Collaborate remotely on-line
- Multi-user database access
- Precise planning – even for multiple targets
- Instant treatment planning
- New dimensions give freedom in planning
- Previous patient records integrated
